

Digital Presence Audit Report

SEO • GEO • AEO Optimization Analysis

CLIENT lovorian.ai (Lovorian Consulting)
PREPARED July 28, 2026
PREPARED BY Lovorian Consulting
CONTACT Lucas@lovorian.ai | 310-344-5668

OWNER Lucas Rigg
BUSINESS ADDRESS Torrance, CA (Southern California service area)
BUSINESS PHONE 310-344-5668

This comprehensive audit evaluates lovorian.ai across three critical dimensions of modern search visibility:

- **SEO (Traditional Search Engine Optimization):** Focuses on organic keyword visibility and technical foundations.
- **GEO (Generative Engine Optimization):** Determines whether AI systems like ChatGPT, Claude, and Perplexity cite your business when users ask relevant questions.
- **AEO (Answer Engine Optimization):** Determines whether Google's AI Overviews, voice search (Alexa, Siri), and featured snippets reference your content.

The technical foundation is now strong — an indexed production domain with a sitemap, self-referential canonical, and rich structured data including LocalBusiness with full contact details. The biggest remaining opportunity is proof and authority: shipping real case studies, gathering reviews, and publishing fresh content that AI systems will actually cite.

6.7/10

SEO SCORE

5.8/10

GEO SCORE

6.2/10

AEO SCORE

OVERALL DIGITAL PRESENCE SCORE

6.2/10

SCORECARD

SEO — Traditional Search Engine Optimization

Factor	Score	Assessment
Domain/URL Structure	8/10	Branded production domain (lovorian.ai); self-canonical; clean URLs.
Title Tags	8/10	Names the service and Southern California; strong per-page titles.
Content Depth	6/10	Solid multi-page site; the /work page is still 'coming soon' and there's no blog.
Technical SEO	8/10	Indexable; sitemap + robots; self-canonical; rich schema site-wide.
Local SEO	6/10	LocalBusiness markup with phone + Torrance/CA; add a GBP next.
Internal Linking	7/10	Full six-page nav with breadcrumbs; no broken or orphaned links.
Backlinks/Authority	4/10	New domain; off-site authority not tool-verifiable — scored conservatively.

Combined Average: 6.7/10

GEO — Generative Engine (AI Visibility) Optimization

Factor	Score	Assessment
Citation-Worthy Content	4/10	Clear explainers and an FAQ, but no original data an AI would cite as a source.
Entity Clarity	8/10	Organization + LocalBusiness + Person markup; consistent NAP and founder.
Structured Data	9/10	Verified in raw HTML: Organization, LocalBusiness (NAP), Person, Service x5, FAQPage, ContactPage.
E-E-A-T Signals	5/10	Real founder bio + Person markup, but no certs or reviews yet; /work shows no proof.
Content Freshness	3/10	No blog or dated updates; /work is 'coming soon'.

Combined Average: 5.8/10

AEO — Answer Engine (Voice & Featured Snippets) Optimization

Factor	Score	Assessment
FAQ Structure	7/10	Six-question FAQ on /audit backed by FAQPage markup.
Answer-Ready Content	6/10	FAQ answers and the 'how it works' steps give engines liftable Q&A.
Voice Search Optimization	6/10	Conversational FAQ questions match how people speak.
Featured Snippet Potential	6/10	FAQPage, clear headings and steps; snippets attainable.
Question Targeting	6/10	Targets real buyer questions — cost, DIY vs developer.

Combined Average: 6.2/10

STRATEGIC ROADMAP TO 9.0/10

Phase 1: Proof & E-E-A-T (+1.2 points)

1 Ship Real Case Studies on /work

Replace the 'Case Studies Coming Soon' page with 2-3 real Digital Presence Audit results — before/after scores and concrete outcomes. The page already promises 'real, detailed case studies,' so deliver them.

2 Gather Reviews & Add Review Markup

Collect named Google/LinkedIn reviews from early audit clients and add Review / AggregateRating structured data (behind-the-scenes code that helps search engines and AI understand your business info). Also add Lucas's relevant credentials to /about.

Phase 2: Content Depth & Freshness (+0.9 points)

1 Launch a Blog

Publish dated posts such as "What Is GEO (Generative Engine Optimization) and Why SMBs Should Care," "SEO vs GEO vs AEO, Explained," and "How to Tell If AI Tools Recommend Your Business" to signal an active, current site and target buyer questions.

Phase 3: Local Authority (+0.4 points)

1 Claim a Google Business Profile & Citations

Create and verify a Google Business Profile for the Torrance / Southern California service area, then build consistent directory citations (Google, LinkedIn, Clutch) that match the on-site NAP (310-344-5668, Torrance) exactly.

Phase 4: GEO Authority (+0.3 points)

1 Publish a Citation-Worthy Benchmark

Turn Lovorian's own audit data into a shareable Southern California SMB digital-presence benchmark (original data) that AI systems and local press will cite back to you.

OFF-SITE REMEDIATION PLAN — NO WEBSITE ACCESS REQUIRED

These improvements can begin immediately, without developer involvement or website credentials. They strengthen how search engines and AI systems perceive the business regardless of the website itself.

Can start today — no code access needed

Create and verify a Google Business Profile

Set up a profile as a Marketing / Business Consultant for the Torrance / Southern California service area — services, hours, photos, and a seeded Q&A. No website access needed.

Gather named client reviews

Ask early audit clients for Google and LinkedIn reviews under their real names — named reviews are E-E-A-T signals both Google and AI assistants lean on.

Build consistent directory citations

List Lovorian on Google, LinkedIn, and consultant directories (e.g. Clutch) with a name/phone/service-area that matches the on-site NAP (310-344-5668, Torrance) exactly.

Maintain one consistent entity footprint

Keep the LinkedIn company page and Lucas Rigg founder profile using the same name and description as the site so AI systems converge on a single identity.

ON-SITE CHANGES — REQUIRE WEBSITE ACCESS

These items from the roadmap require edits to the website itself (developer, webmaster, or CMS access).

Requires website/developer access

Ship case studies + Review markup on /work

Replace the 'coming soon' page with real results and add Review/AggregateRating markup — see Roadmap Phase 1.

Add a blog and founder credentials

Requires CMS/code access — see Roadmap Phases 1-2.

Publish a citation-worthy benchmark asset

Original data hub for AI systems to cite — see Roadmap Phase 4.

PRIORITY MATRIX — WHERE TO START

Each initiative below is plotted by the effort it takes against the impact it delivers; the upper-left "Do First" quadrant (low effort, high impact) is where we recommend starting. The three highest-priority items are ranked **gold, silver, and bronze**, and the numbers match the quick wins on the following page.

QUICK WINS — IMMEDIATE IMPACT

Numbered badges match the priority matrix on the previous page.

ACTION	SCORE LIFT	EFFORT / IMPACT
1 Ship 2-3 real case studies on the /work page	+0.5	Low effort / High impact
2 Create & verify a Google Business Profile	+0.3	Low effort / High impact
3 Gather named reviews + add Review markup	+0.4	Low effort / High impact
5 Add founder credentials to the About page	+0.2	Low effort / Medium impact

These quick wins add **+1.4** — lifting the score from **6.2** to about **7.6/10**. Completing the full roadmap reaches the projected 9.0/10 shown below.

9.0/10
